

Use-Case Flow

PES1UG24CS144-Clinical Trial Subject Recruitment Engine

Use Case	UC2 – Check Eligibility
Goal	Decide whether a trial candidate meets the criteria of a clinical trial.
Actor	Trial Candidate, with help from the Clinical Researcher (who maintains the criteria).
Precondition	1. The candidate is registered and logged in. 2. The trial has inclusion and exclusion criteria defined by the researcher (FR-002).
Postcondition	1. The candidate has an eligibility result of Eligible or Not Eligible saved against the trial. 2. An audit trail entry has been written for the decision (NFR-001).
Main flow	1. The Trial Candidate selects a trial and opens the pre-screening questionnaire. 2. The candidate answers the questions and submits the form. 3. The system checks that all required questions have been answered. 4. The system loads the inclusion and exclusion criteria of the selected trial. 5. The system compares each answer with the criteria. 6. All inclusion criteria are met and no exclusion criterion applies. 7. The system marks the candidate as Eligible and saves the result with the date and time. 8. The system writes an audit trail entry for the decision. 9. The system shows the result and asks the candidate to book an informed consent session. 10. The use case ends successfully.
Alternate Flow	Candidate is not eligible At Step 6, if an exclusion criterion applies: 6a. The system marks the candidate as Not Eligible. 6b. The system saves the result together with the criteria that failed and writes an audit entry. 6c. The system shows the candidate which criteria were not met. 6d. The use case ends without enrolment. Required answer missing At Step 3, if a required question is unanswered: 3a. The system highlights the unanswered questions and does not submit the form. 3b. The candidate completes them and submits again; the flow continues from Step 4.
